

ABSTRACT OF THE DISCLOSURE

A baby band, comprising a baby band body (2) installed on a user (201) and a seat (3) for lateral holding suspended from the baby band body (2) to hold an infant (200) in a laterally held state. The seat (3) for lateral holding comprises a seat body (40) with a head support part (42a) and a hanging board (41) disposed to laterally cross the head support part (42a) and having a rigidity given by a core material (57) formed of a hard material. The lateral both sides of the head support part (42a) are suspended from the baby band body (2) and supported through the hanging board (41).
